WILLIS SYSTEMS

Emergency Covid-19 Mobile Hand Wash Station

A purpose made medical solution for temporary critical care facilities

Emergency Mobile Hand Wash Station

This unit is designed to provide a quick plug and go solution.
It features flexible connections to allow some movement.
The solid surface top with integral basin is designed to prevent germ build-up since basin and rear coved upstand are seamless.
Choose between 2 basin shapes with a TMV3 thermostatic clinical mixer tap as standard.

The rear service void contains 1 ¼ flexible waste and spigot connection for drainage and flexible tails for hot and cold water.

The cupboard provides generous storage for paper towels and sanitiser and can be fitted with cam locks if required.

Industrial grade castors enable the station to be offloaded and distributed in most site conditions whilst the one-man transportation and installation operation complies with safe distancing requirements.

Front castors are lockable to minimize the risk of accidental movement after installation.

Selection of stainless steel and white plastic paper towel and sanitiser dispensers can be provided as an optional extra to meet customers' specification.
